

SPECIFICATIONRange: **MEGA LED**

Code: 1843-S

Light source: LED lamp 240V-9W.

Description: table lamp with three articulation arm: the first joint at the bottom allows you to rotate and incline the fixture inserted in the base; the second joint is in the centre of the arm and allows you to incline the lamp, the third joint is at the top and used to rotate and incline the head. The metal grey ribbed extruded aluminium arm has 3 metal and high-tech polymer joints, each composed of chrome-plated steel jointing elements and a circular pin that has a metal and high-tech polymer knurled surface finish which makes it easier to adjust the friction of the joint. The arm movements are regulated by 2 steel springs applied to the lower arm and 2 steel springs applied to the upper arm.

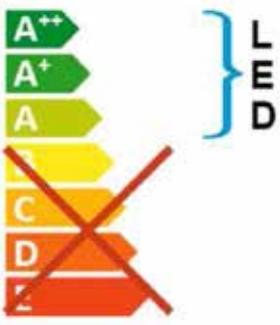

The head is made in transparent polycarbonate and is equipped with an internal high-luminosity glossy aluminium core that houses the 5 leds and the protective light diffusing frosted glass. The upper part of the reflector is made in metal grey painted high-tech polymer, it has radial cuts and the lamp power switch. The circular base is made from metal grey painted grooved sheet metal; the lamp connection pivot is made in chrome-plated metal and has a lateral screw that locks the lamp in place, limiting the angle of rotation.
